

## Patient benefits for using the 340B program

The 340B program provides funding for your HTC. Any income made by the 340B program, by law, goes directly back into improving patient services and programs offered through our HTC. This includes providing salary support for the comprehensive care team and providing funding to expand services and serve more patients across the state of South Carolina. The income made from patients receiving their factor products through any of our 340B contract pharmacies allows our treatment center to continue to serve you with the high level of service and quality you expect.

## How do I get started?

Participation in the 340B drug program is voluntary. Regardless of what pharmacy you choose to use, you will still receive the same comprehensive care you have consistently received from our treatment center. Call our treatment center or speak with a team member in the clinic to see if your non-government insurance will allow you to receive your factor product from a 340B contract pharmacy.

## Living well with a bleeding disorder

South Carolina Hemophilia Treatment Center

## The care you need

Whether you are the parent of a child newly diagnosed with hemophilia or other bleeding disorder or you have lived some time with such a diagnosis, you need a source of comprehensive, knowledgeable and advanced care. That is what we offer at the South Carolina Hemophilia Treatment Center at Prisma Health Children's Hospital—Midlands.

We are skilled in the treatment of your or your child's condition, and we're here to help you on your journey as you adapt to your "new normal."

Please review this brochure to learn more about our services.

### About our hemophilia treatment center

Prisma Health has South Carolina's **only federally supported comprehensive hemophilia treatment center (HTC)**, serving a growing number of both children and adults across the state. We currently serve over 150 patients, including approximately 60 pediatric patients and 90 adults.

Two to three comprehensive clinics are offered each month. Comprehensive clinics use an integrated, team-based approach to improve your health and quality of life. During comprehensive clinics, patients meet with our hematologist, nurse coordinator, pharmacist, physical therapist, psychologist, program associate and social worker. We plan to add other professionals to our comprehensive clinic to optimize your care.

### Benefits of our center providing your hemophilia care

An annual visit to our HTC will provide you with a variety of resources to improve your health and quality of life. Your care will be directed by a physician specially trained in hematology and hemophilia. A dedicated nurse will assist in insurance approvals and coordination of care. A pharmacist is available during clinic to help optimize your medication regimen and answer medication-related questions.

A physical therapist can recommend appropriate outpatient therapies. A program associate ensures you are connected with national databases that contribute to research. A psychologist and social worker are available to meet your psychosocial needs and work with schools, employers and insurance companies to help maintain access to your care.

### Medication management through our 340B program

Our HTC is pleased to offer bleeding disorder medications through the federal 340B drug program. The 340B program was created by Congress in 1992 as part of the Veteran's Health Care Act. This act allows HTCs to purchase clotting factor at a discount.

Pharmacies that are independent of the treatment center do not qualify for this discount. However, the treatment center has contracts with select pharmacies, allowing them to use 340B drug pricing to provide factor products to our patients. For an updated list of contract pharmacies, please speak to a member of the HTC staff.
